About Us

GUEST CONTROL SYSTEMS LIMITED was founded on a vision to innovate unique smart technology solutions for the Hospitality Industry. GUEST CONTROL SYSTEMS LIMITED brings to its position as an advance smart technology solutions design and development company a rich heritage of innovation and technological advancement. Today, GUEST CONTROL SYSTEMS LIMITED has moved well beyond the role of traditional solution development and has been focusing on creating total vertical industry applications and solutions that can help the vertical industry to reduce their capital expenditure, operation expenditure while improving their revenue by improving operational performance. The result is a unique market niche highlighting the company's ability to offer its portfolio of applications and solutions at lower cost, increased reliability with value added advantages. GUEST CONTROL SYSTEMS LIMITED solutions are at works in thousands of hospitality and vertical enterprises extended across the globes including those prestigious fortune 500 companies. It is this level of experience and performance that has positioned the company in a place of prominence as it continues to expand its solutions portfolio to meet the challenging hospitality and vertical industry market needs.

Switch Panel Backlit

- Backlit improve the switch visibility.
- Proximity sensor backlit activation enhance personal experience

Functional Highlights

Highlights:

- Large button
- No click sound or crisp click sound
- With or without proximity sensing
- With or without side rim
- Backlit
- Color options (Custom color on request)
- Plastic, glass or brass alloy finishing
- Printed or laser carve lettering
- Low voltage, high voltage application
- Optional RF433 wireless protocol

Frequently Asked Questions

Q01. What are the faceplate material available for the switch panels?

A01: The materials available are plastic, metal alloy, brushed metal and tempered glass.

Q02: What are the choice of colors available for the switch panels?

A02: The standard colors available are: Black, white, grey and champagne gold. Other colors available on request (customer need to provide color sample or pentone color code)

Q03: Can the switch panel support 2 functions on one switch button?

A03: Depending on the model, for Beste series, maximum it can support 2 functions on one button (One at the top and another at bottom of the button).

Q04: Can a multi-linked (multiple gangs) switch panel be mounted horizontally or vertically?

A04: Depends on the model used, the center core is square in shape therefore it can be mounted vertically or horizontally.

Q05: Can the switch panel protected against water?

A05: Yes with the addition of a water proof cover. Water proof cover are available in different standard colors (black, white, grey and champagne gold). Any other color has to be customized, with customers providing color sample or Pantone code.

Q06: Can the switches lighted up in the dark when someone approaches the switch panel?

A06: Yes if the switches have proximity sensors incorporated.

Frequently Asked Questions

Q07: where can I buy the 86 junction box to install the switch panel?

A07: GuestControl™ can supply the standard 86 electrical junction box or the customer can buy the same from any of the local electrical accessories supply shop. Please note that 86 junction box from different manufacturers may have some slight variation on the measurements.

Q08: Can I have text or icon on the switches?

A08: Yes, at GuestControl™, we laser engrave the text or icon on the switches. This is to improve the durability of the text or icon, which will not get erased after long usage.

Q09: Other than hotels, can GuestControl™ switch panels use in others places?

A09: Yes, GuestControl™ switch panels can be used in offices, homes or any other places where switch panels are required

Q10: Does the switch panel come with side rim?

A10: The side rim is an option. Customer has the choice to decide with or without side rim. The standard offer is without side rim.

Q11: What type of plastic material is used for the switch panel?

A11: The switch panel uses fire retardant PVC plastic. The plastic material will not spread the fire upon burning.

Q12: Does the switches have backlights?

A12: Yes. The backlight can also be removed.

Frequently Asked Questions

Q13: What is the difference between the low cost plastic switches available in the market and GuestControl™ switches?

A13: GuestControl™ switches are made of high quality fire retardant plastic that can contain fire in the event of any fire hazard. In addition, the circuitry are made of high quality components which have long MTTF. Cheap switches are made of normal plastic that will not contain the fire when burn. If the switches are made of recycled plastic the fume generated upon burning may be poisonous. Cheap components are normally used for the circuitry to further reduce cost.

Q14: Why is that there are similar switch panels available in the market but with big variation on prices?

A14: There are some small manufacturers producing switch panels using common mold, that is the reason they look similar. By using common mold, they can save the cost of investment on the mold, which is expensive. In addition, the price can further be reduced if they use low cost material, components and at the same time reduce the thickness of the panel. All in all, the cost of manufacturing can be reduced drastically in the expense of product quality and safety consideration.

Q15: Can GuestControl™ custom design switch panel?

A15: Yes, GuestControl™ can provide design service for specific switch panel requirement including molding and final production.

Q16: Does GuestControl™ provide any warranty for the Switch Panel?

A16: Yes GuestControl™ provides limited warranty against manufacturing defect for one year from the date of shipment. Please refer to GuestControl™ warranty terms and conditions.
