Ultra-Thin Design

The thickness of the entire switch panel is 6mm, and the 1.5mm-thick panel buttons have a longitudinal arc design. The middle section should be kept flat for a certain distance, and the two ends should be slightly sloped. The slim appearance maintains the beauty of Laffey's minimalist design, and the volume is moderate. , It feels very comfortable to hold in the hand.

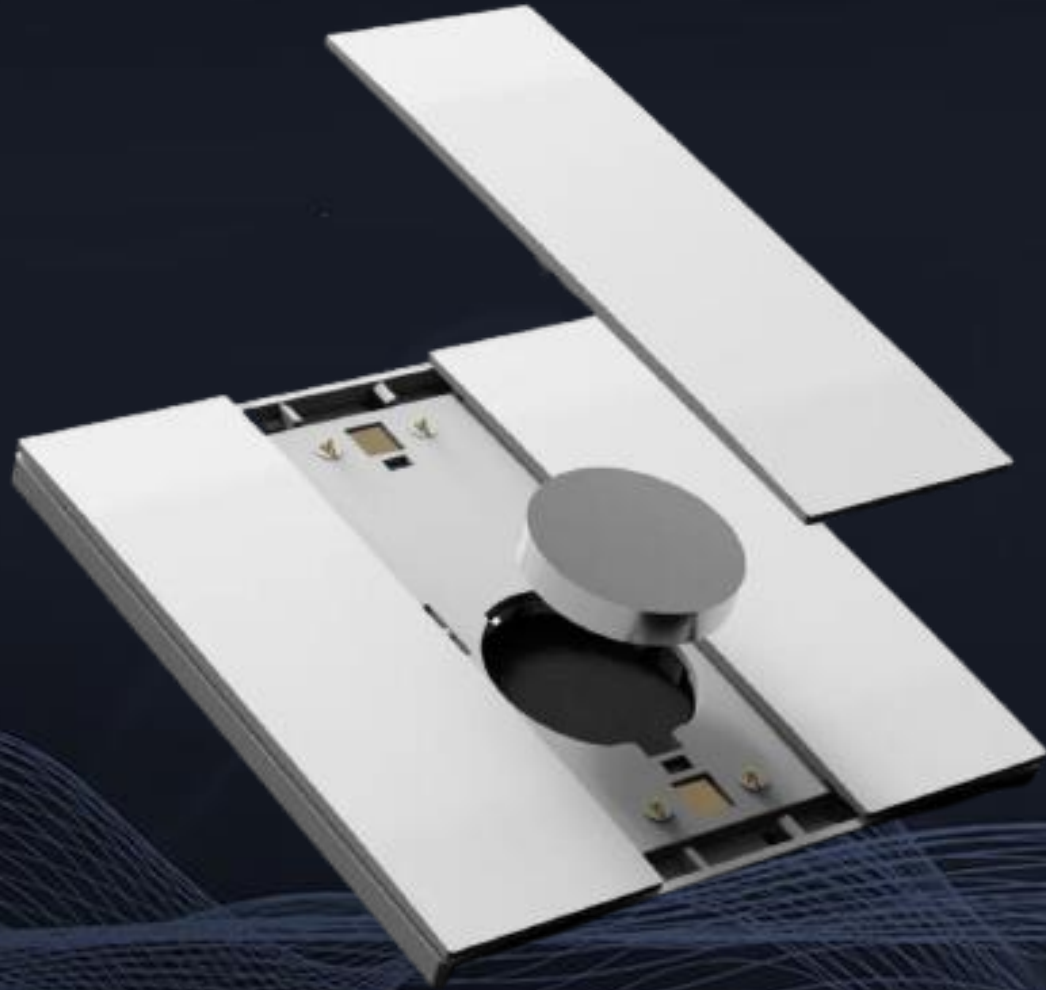

Balance Design Architecture

Imaging the mobile phone design philosophy, the four-balanced independent suspension forms a controllable suspension control structure to alleviate and suppress the unevenness caused by the buttons to ensure the switch buttons can be relatively "soft" at any time in enabling the balanced positioning of each contact. This perfect balanced design effectively ensures the neatness of the product mounting onto wall.

Convenience Battery Replacement

- A design with simplicity in replacing depleted battery.
- The battery is placed in the middle of the switch front panel.
- Just remove the middle button and replace the battery.

2450 Large Capacity Battery, Longer Lifespan

Large-capacity button battery CR2450 with rated current 0.2mA, The battery can provide 0.001mA to 5mA output current, continuous output current up to 15mA and flash output current up to 30mA.
The only needs to be replaced once every 2 years and it is easy available.
